

CABLE WRAP

**Tight Gauge Control.
Defect-Free Surface.
Narrow Slit Widths
and Large Diameter Coils.**

requires critical gauge control capabilities to ensure there's no variation in gauge within coils or from one shipment to another. Those precise tolerances are assured by state-of-the-art gauge control equipment on all of our rolling mills. Another requirement is that the surface of cable wrap be totally defect-free. We employ a leading-edge detection device that can spot even the most minute defect, so it's not delivered to you.

JW Aluminum has an excellent reputation for the supply of world-class-quality cable wrap for a variety of critical telecommunications industry applications. We're one of the few producers capable of furnishing precision-slit product as narrow as 1/2" in extremely large coils, ODs up to 80", that allow you to schedule longer production runs.

We supply cable wrap either in master coils or in slit widths, depending on your requirements. Our product is produced from 1100, 1060 and 1350 alloys that are the standard for cable applications. Gauge varies from .0010" to .037" and width between 1/2" and 62".

Producing quality cable wrap

Typical of our ability to deliver quality product consistently is a reject rate of only a fraction of one percent a year.

A Technical Partnership

Our knowledgeable technical staff offers you many significant benefits. Three metallurgists, plus a staff chemist, are an integral part of our quality and new product development programs, backed by our well-equipped research and testing facilities.

We'll even send technical representatives to your plant to work with your staff to help develop modifications to products or processes that can lead to quality, productivity or cost-saving improvements. The people we send know our processes and capabilities inside and out. When they promise a product modification, they know

it's possible, since they'll be part of the team that will produce it.

Technical representatives, together with sales and customer service representatives, make up our cable wrap product team, a team dedicated to ensuring you get total satisfaction from the metal we furnish you.
