

# LITHO SHEET

**Blemish-Free  
Surface,  
Exceptional  
Flatness.  
Quality, Uniform  
Coating.**

together with clean, burr-free edges.

#### *A Technical Partnership*

Our knowledgeable technical staff offers you many significant benefits. Three metallurgists, plus a staff chemist, are an integral part of our quality and new product development programs, backed by our well-equipped research and testing facilities.

We'll even send technical representatives to your plant to work with your staff to help develop modifications to products or processes that can lead to quality, productivity or cost-saving improvements. The people we send know our processes and capabilities inside and out. When they promise a product modification, they know it's possible, since they'll be part of the team that will produce it.

JW Aluminum's proven skills in rolling aluminum products with superior surface quality, tight dimensional control and uniform coatings are important factors in our ability to produce quality litho sheet.

We supply litho sheet in 1050 alloy, in gauges from .007" to .016" and in widths ranging from 13" to 54".

A key step in assuring the high quality of our litho sheet is our

tension leveling line, which provides the perfectly flat product you require, so there is no distortion in the printing process. Its flatness is confirmed on our unique, marble-topped testing table through a sophisticated laser-scanning process.

Other critical factors assured by our state-of-the-art production facilities include exceptionally tight gauge and width tolerances and close control of slit widths,
