

FOR IMMEDIATE RELEASE

JW Aluminum Announces Energy Surcharge

(Mt. Holly, SC) April 4, 2011 — As you know, the world energy markets have been extremely volatile over the last several months due to a series of well publicized events, which are out of our control. Oil is trading at levels above \$100 per barrel, gas and diesel fuel prices at the pump are on the rise, and nearly all input costs indices have increased rapidly and significantly. Given the speed and rate at which all of this has occurred, we are forced to institute an energy surcharge. In an effort to simplify the surcharge, effective with new orders entered on or after May 1, 2011, an energy surcharge of \$0.01 cents per pound will be added to all conversion prices.

JW Aluminum will continue to monitor the extreme volatility of the energy markets to offer our customers alternatives, such as freight FOB our manufacturing facilities, which can be coordinated by our transportation organization.

Please contact your JW Aluminum representative with any questions.

JW Aluminum manufactures specialty flat-rolled aluminum products including “fin stock” used by the heating and cooling industry, light gauge converter foil for the flexible packaging industry, honeycomb foil for the aerospace industry, bare and painted sheet products for window coverings and the building and construction markets, and other foil and sheet products. JW Aluminum operates plants in Mt. Holly, South Carolina; St. Louis, Missouri; Russellville, Arkansas and Williamsport, Pennsylvania.
